

TARA LABS

The Zero GOLD Gen 2 (G2)

One of the most successful audio cables of all time is the original ZERO Gold Interconnect from TARA Labs. The original ZERO Gold was praised for its breakthrough performance. In the Gen 2 design, technology has literally been borrowed from the famous and more expensive ZERO Evolution Interconnect. Available now is the ZERO Gold Generation 2 Interconnect at a lower price with complete flexibility and better performance than the original ZERO Gold. The breakthrough improvements include greater bandwidth and a completely new and proprietary air-dielectric construction. TARA Labs first introduced air dielectric interconnect cables in 1986; 30 years ago. And instead of using round conductors in air-tubes, TARA Labs uses Rectangular Solid Core® (RSC®) conductors which are 'seated' inside small air-tubes™. The new Zero Gold G2 makes full use of this technology.

The new Zero Gold G2 will offer the listener an audio cable that is absolutely fabulous! Extremely low in capacitance at 3 pF, with a sound that can be described as holographic. Exceptional high-frequency extension and detail, expansive soundstage with spatial cues with a bottom end that is rich and full of bloom, in addition to a substantial low noise floor. This interconnect is simply astounding for the price. And for audiophiles who remember the original Zero Gold, the flexibility of the new Zero Gold G2 will simply amaze!
