

TARA LABS

RSC Prime M1 Speaker Cable

The RSC Prime M1 Speaker cable is a design concept taken from the RSC Air series speaker cable. The M1 speaker cable is the only speaker cable in the 'M' Series™ to use frequency tuned RSC Gen 2 conductors. The conductors are arranged using TARA Labs' Helix Array® around a very special blend of poly/organic material. This unique material exclusive to TARA Labs offers flexibility with increased tonal accuracy, detail and transparency not otherwise possible with lesser flexible materials.

- * BSM (with 1/4" Spades or Bananas)
- * Helix arrangement of fine Teflon and Polyethylene tubes grouped with positive and negative conductors around a larger center tube.
 - * Capacitance 14 pf per foot
 - * SA-OF8N® copper.
- * Unusually open and revealing speaker cable that is also, smoothness and resolution.
 - * Well balanced between musicality

REVIEWS:

"Took the TARA Labs Prime M1 speaker cables out of the box and heard a difference right away. Bass weight was there, so was a great soundstage. I use B&W speakers and the combination is really great. Thanks!" - Bill H., USA

"I went and purchased TARA Labs Prime M1 audio cables on the advice of a friend without listening to them. I was extremely pleased to their sound. Detailed, clear, with sounding articulate. I has replaced my Nordost cables for just that reason. Really great cables, thanks!" - Marcus T., USA

"I hooked up a TARA Labs Prime between my CJ pre-amp and amp and could immediately hear the difference. Clean, precise, detailed with a real full mid-range. Saving up my money to be able to get a 0.8 or maybe even a Zero (though I doubt my wife would ever let me do that :) - Kevin M. / NJ, USA
